

**Dr. Rick Malter paraphrasing Joseph Farrell writing about
Babylon's Banksters, pp.288-289:**

About food, pharmaceuticals and vaccines

“It is a kind of false alchemy, a biochemical black hole into which the health of a person is inevitably sucked and from which it can never emerge, unless the underlying idea of patented drugs and vaccines is clearly repudiated and rejected. The system of patented drugs is deliberately designed to enrich only those who control the invention, patenting and marketing of dangerous toxic drugs and vaccines. The system can never serve the broader public optimal health because it is not designed to do so. The system is built on lies, deceit, fraud, and gross exaggerations of what these dangerous patented products can do for a person's health and immune system.

<http://www.malterinstitute.org/healthcongame.pdf> . In fact, numerous drug companies have been repeatedly found guilty of fraud and illegal marketing of their drugs. These drug companies have paid millions and sometimes billions of dollars in fines. How does one trust the “scientific” research of drug companies that engage in fraudulent research and illegal marketing of dangerous drugs?

In the methods pursued to replace healthy nutritious food with junk food and artificial chemicals, a well worn playbook has been followed. This playbook also has included methods for eliminating high quality dietary supplements from the market place while filling the market place with toxic patented drugs and vaccines whose safety and efficacy are unproven or are highly questionable. Since the known dangers of drugs and vaccines are quite substantial, drug company money is used to buy liability “protection” via laws that prevent injured parties from filing lawsuits against drug and vaccine manufacturers.

The Big Pharma/Bankster's methods include any tactics that will assure expanding their monopolies including those dominating the “health/disease” care system. These tactics include dominating and controlling the training and practice of the “high priests” of health/disease care, namely medical doctors and psychiatrists. The tactics also include labeling as heresy any theory, practice, or products that are not under the total control of the Bankster's and their brethren in Big Pharma. Any practice that departs from the “standard of care” is labeled “heresy” and not in the “public interest.” Supporting “peer reviewed” junk science lends a certain type of credibility to the whole corrupt enterprise.
